

Quick Facts about ProHeart 6 and the New Requirements

- ProHeart 6 can be given after we run a simple set of 3 blood tests:
 1. Heartworm test (normally about \$35)
 2. CBC, or Complete Blood Count (normally about \$48)
 3. Chemistry panel, to check liver and kidney functions (normally about \$80)
- The set of tests are heavily discounted to a *total cost of \$75*
- These tests only need to be performed *once*, prior to beginning the ProHeart injection.
- In 6-12 months we do need to repeat the Heartworm test in order to make sure that your pet did not have an immature heartworm infection at the time we started administering the ProHeart 6 injection
- ProHeart 6 cannot be given within 30 days of a vaccination.
- The cost for ProHeart 6 is very comparable to a 6-month supply of traditional monthly Heartworm Prevention
